

I am a USC graduate student majored in computer science at the University of Southern California and I am responding to your advertisement for the Software Engineer Intern, available at LinkedIn. My qualifications include a first-class degree at the University of Nottingham and more than 2 years of development experience.

I have developed several websites as a full-stack developer language and is interesting in implementing website applications. I'm good at HTML 5 as well as CSS design and I am dealing with one project in Node.js so I don't think JavaScript and backend will obstacles for me. Besides, I am implementing two iOS projects now, which one of them will be launched in December.

I am very excited for the job opportunity provided from Laserfiche and I believe that I would become an excellent Web Developer in your company. Thanks to sufficient web developing experience, I have confidence to maintain your official website blamelessly and I would try my best to improve your website qualities from various aspects, including but not restricted to security issues, speed and performances. I like to cooperate with others and possess enthusiasm with new technology to fit improving hardware offering. I am looking forward to hearing from you to discuss my qualifications in detail.
